PROJECT PROPOSAL

DESIGN AND DEVELOPMENT OF AN INFORMATIVE WEBSITE FOR THE DANGOTE EAST AFRICA PETROLEUM REFINERY PROJECT IN KENYA

STUDENT NAME: Victor Mwangi Muriuki

REGISTRATION NUMBER: 24/00532

SUPERVISOR: Geoffrey Rumbe

COURSE: Diploma in Business Information Technology (DBIT) – Project

YEAR: 2026

DECLARATION

- I hereby declare that this project proposal is my original work and has not been submitted to any other institution for academic purposes. All sources of information used in preparing this proposal have been acknowledged through appropriate referencing.

1.BACKGROUND

- The Dangote East Africa Petroleum Refinery is a major industrial project being developed in Lamu County, Kenya. The project was officially launched through a groundbreaking ceremony in September 2026 and is planned to have a processing capacity of approximately 700,000 barrels of crude oil per day. The wider project is also expected to include facilities such as a power plant, fertilizer and chemical manufacturing facilities.
- The refinery is expected to contribute to Kenya's energy security, create employment opportunities and support the growth of industries and businesses in Lamu and other parts of the region. It is also connected to the wider LAPSSET development and is expected to increase economic activities around Lamu Port.
- However, information about the project is currently available from different sources, including government websites, news platforms and other online publications. This makes it difficult for students, researchers and members of the public to access all the important information from one place.
- The proposed project will therefore focus on designing and developing an informative website that brings together important information about the Dangote East Africa Petroleum Refinery Project. The website will provide information about the project's background, location, facilities, expected benefits and development progress in a simple and organized manner.

2.PROBLEM STATEMENT

- The Dangote East Africa Petroleum Refinery Project is an important industrial development that has attracted attention from Kenyans and other people across East Africa.
- Despite its importance, information about the project is scattered across different websites and online platforms. Individuals interested in understanding the refinery may have to visit several websites to obtain information about its location, facilities, expected economic benefits and development progress.
- This creates difficulties for students, researchers and members of the public who require reliable and organized information about the project. It can also be time-consuming to compare information from different sources.
- There is therefore a need for a centralized and user-friendly website that brings together relevant information about the Dangote East Africa Petroleum Refinery Project.
- The proposed website aims to address this problem by providing an organized platform where users can easily access and understand information about the refinery.

3.PROPOSED SOLUTION

- The proposed solution is to design and develop an informative website about the Dangote East Africa Petroleum Refinery Project in Kenya.
- The website will provide organized information covering the following areas:
- Project Background: Information about the history and development of the refinery.
- Project Location: Details about the location of the refinery in Lamu County.
- Major Facilities: Information about the refinery and its associated industrial facilities.
- Economic Benefits: Information about expected employment opportunities, industrial development and economic growth.
- Environmental and Social Aspects: Information about the potential environmental and social effects of the project.
- Development Progress: Updates about important developments and milestones associated with the refinery.
- The website will have a simple navigation system to allow users to move easily between different sections. It will also include relevant images and visual information to improve the presentation of content.
- The website will mainly be developed using HTML, CSS and JavaScript, while PHP and MySQL may be incorporated where database functionality is required.

4. PROJECT OBJECTIVES

- **4.1 General Objective**
- To design and develop an informative, accessible and user-friendly website that provides organized information about the Dangote East Africa Petroleum Refinery Project in Kenya.
- **4.2 Specific Objectives**
- The specific objectives of the project are:
- 1. To research and collect relevant information about the Dangote East Africa Petroleum Refinery Project from reliable sources.
- 2. To design a website that organizes information about the refinery's background, location, major facilities and expected benefits.
- 3. To develop a user-friendly website that allows visitors to access information through clearly organized sections and navigation links.
- 4. To incorporate relevant images and visual content to improve the presentation and understanding of information about the project.
- 5. To develop a responsive website that can be accessed using both computers and mobile phones.
- 6. To test the website's functionality, navigation and responsiveness to ensure that it meets the intended requirements.

5. LITERATURE REVIEW

- Different sources have provided information about the Dangote refinery project and its expected contribution to Kenya's development.
- Government publications indicate that the refinery is expected to strengthen the country's industrial and energy sectors while supporting economic activities in Lamu County.
- The Special Economic Zones Authority has also identified the refinery as an important investment within the LAPSSET Special Economic Zone. The project is expected to support employment opportunities and encourage business activities in sectors such as manufacturing, logistics and engineering.
- Existing online platforms provide useful information about the refinery. However, the information is distributed across different websites, making it difficult for users to access all the relevant details from one location.
- The proposed project seeks to address this gap by developing a centralized informative website that organizes available information into clearly defined sections. This will make it easier for students, researchers and members of the public to understand the refinery project and its expected contribution to Kenya's development.

6. SIGNIFICANCE OF THE STUDY

- The proposed project will be beneficial to different groups of people in society.
- Students and Researchers
- The website will provide an organized source of information that students and researchers can use when studying Kenya's petroleum industry, industrial development and major infrastructure projects.
- Members of the Public
- The website will make it easier for the public to access basic information about the Dangote refinery without having to search through multiple websites.
- Businesses and Investors
- The information provided may help interested businesses and investors understand the project's expected facilities, location and potential economic opportunities.
- The Education Sector
- The project will demonstrate how information technology can be used to collect, organize and present information about important national developments.
- The Student
- The project will provide an opportunity to apply knowledge and practical skills acquired during the Diploma in Business Information Technology course, particularly in web design, programming, system analysis and software testing.

7. METHODOLOGY

- **7.1 Research Methodology**
- Information for this project will mainly be collected through online research.
- The following methods will be used:
- Document Review
- Government publications, official reports and other relevant documents will be reviewed to obtain information about the refinery project.
- Internet Research
- Reliable websites, news platforms and official online publications will be consulted to gather relevant information about the refinery's background, location, facilities and expected benefits.
- Information Analysis
- The information collected will be reviewed, organized and grouped according to the different sections of the proposed website.
- The collected information will be checked against available reliable sources to improve accuracy and reduce the possibility of presenting misleading information.
- **7.2 Development Methodology**
- The project will follow a structured website development approach involving the following activities:
- 1. Requirements Identification
- The website requirements will be identified, including the type of information to be presented, website structure and features required by users.
- 2. Website Design
- The layout, navigation structure, colour scheme and appearance of the website will be planned to ensure simplicity and ease of use.
- 3. Website Development
- HTML will be used to create the structure of the website, CSS will be used for styling and layout, while JavaScript will be used to introduce interactive features.
- PHP and MySQL may be incorporated if database functionality becomes necessary.
- 4. Content Integration
- The information collected during research will be organized and added to the appropriate website sections. Relevant images will also be included.
- 5. System Testing
- The website will be tested to identify and correct errors. Testing will focus on navigation links, page loading, responsiveness and the proper display of information.
- 6. Evaluation and Improvement
- The website will be reviewed to ensure that it meets the project objectives. Necessary corrections and improvements will be made before the final presentation and submission.

8. BUDGET AND RESOURCES

Item	Estimated Cost (KSh)
Internet and research	1,500
Domain and hosting, if required	2,500
Printing and documentation	1,000
Miscellaneous expenses	1,000
	6,000
TOTAL	

9. PROJECT SCHEDULE

Task No.	Task Description	Estimated Hours	Planned Period	Deliverable
1	Research and collection of information	10	Week 1	Research information
2	Requirements gathering and proposal preparation	6	Week 2	Project proposal
3	Website planning and interface design	8	Week 3	Website design
4	Development of the main website pages	20	Week 4	Working website
5	Adding content, images and interactive features	8	Week 5	Complete website content
6	Testing and correction of errors	8	Week 6	Tested website
7	Final improvements and documentation	6	Week 7	Final project documentation
8	Final testing, presentation and submission	4	Week 8	Completed project
	TOTAL	70 HOURS	8 WEEKS	

10. CONCLUSION

- The proposed project aims to design and develop an informative website that brings together important information about the Dangote East Africa Petroleum Refinery Project in Kenya.
- The website will address the challenge of scattered information by providing a centralized platform where students, researchers and members of the public can easily access information about the refinery.
- It will also provide an opportunity to apply practical knowledge and skills acquired during the Diploma in Business Information Technology course, particularly in web development, programming and system testing.
- Ultimately, the project is expected to produce a simple, accessible and informative website that contributes to public awareness and understanding of an important industrial development in Kenya.
