PROJECT PROPOSAL DOCUMENT

OUTLINE OF THE CONTENTS OF A PROJECT PROPOSAL

The actual content of the proposal may vary depending on student and supervisor interests but it must contain as a **minimum**, the following sections:
The Title page contains the following centred information:

- Full title of the project
- Candidate's name
- Registration number
- Name of supervisor
- Name of the course/qualification towards which the project contributes

The second page should contain a declaration on originality of work –duly signed

The third page should contain the Table of Contents

The main document starts at the fourth page, the contents of which should follow the following outline.

1. Background

This is usually a detailed background information about the project research area and about the client. It should be clear on what business the client is involved in and how operations are currently conducted. It sets the stage for the problems that will arise.

2. Problem Statement

This is a statement of the problem the project is intended to address. It should clearly show the problem in the light of the project research and its contribution to the solution. Ideally it should originate from the way the organization currently performs its functions. Each problem should be stated clearly with a brief explanation on how it arises from the functions to be undertaken.

3. Proposed Solution

This is a high level description of the proposed system touching on major system functionality or features.
N.B. This should not be a basic statement of automating a manual system.

4. Project objectives

Clear, concise "SMART" objectives should be provided including research and system development related objectives. They are the basis upon which the success of the project will be evaluated. Therefore they should basically address each of the problems being faced by the organization.

> ***SMART*** *is an acronym that stands for Specific, Measurable, Achievable, Realistic, and Timely. ...* ***SMART*** *goals are: Specific: Well defined, clear, and unambiguous. Measurable: With specific criteria that measure your progress toward the accomplishment of the goal. Achievable: Attainable and not impossible to achieve.*

Objectives are general or specific

General objective:
It gives the main direction of study and must be in line with the topic. Eg for the project titled "*The Role of Mobile Devices in Enhancing Project-Based Learning"* the general objective would be "*to evaluate the role played by mobile devices in enhancing project-based learning outcomes in CBC senior secondary school classrooms of Kenya."*

Specific objectives
Specific objectives in research are the clear, precise, and measurable steps that a researcher intends to achieve in order to answer the research problem and accomplish the general objective of the study. They break down the main goal of the research into smaller achievable tasks.

For "*The Role of Mobile Devices in Enhancing Project-Based Learning (PBL)" the specific objectives will include*

1. To describe how mobile devices are used during PBL in CBC classrooms.
2. To investigate the relationship between the use of mobile devices and student engagement, and the development of CBC competencies.
3. To explore teachers' practices, beliefs, and preparedness in integrating mobile devices into PBL.
4. To develop evidence-based recommendations and an actionable guide on integrating mobile devices into PBL in Kenyan secondary schools under the CBC framework.

Research Topic:
Effects of Social Media on Academic Performance among University Students

General Objective:
To examine the effects of social media on academic performance among university students.

Specific Objectives:

1. *To determine the amount of time students spend on social media daily.*
2. *To examine the relationship between social media usage and students' grades.*
3. *To identify the most commonly used social media platforms among university students.*
4. *To assess the positive and negative effects of social media on students' study habits.*

5. Literature Review

A survey of literature of earlier works or studies conducted in the researcher's area of interest to identify current developments, challenges and gaps that need to be addressed. This presents a good foundation for the researcher to formulate and concretize their problem.

6. Significance of the study

Explain the impact of the study to the society

7. Methodology

Research methodology

Explain how you obtained information regarding your project eg use of interviews, questionnaire, observation e.t.c

> *Research methodology is the specific procedures or techniques used to identify, select, process, and analyze information about a topic. In a research paper, the methodology section allows the reader to critically evaluate a study's overall validity and reliability. The methodology section answers two main questions: How was the data collected or generated? How was it analyzed?*

Development Methodology

This is basically an outline of the plan of action. It encompassess the all-round developmental methodology driving your entire data collection to system development.

N.B. Avoid using basic lifecycle-related process models e.g. prototyping – these are not methodologies.

8. Budget and resources

This should generally address all the envisaged resources that will enable the development of the system to succeed. The key items are hardware, software,human and any other costs that will be incurred.

9. Project schedule

This is a breakdown of all the tasks that will be carried out in the course of carrying the project. An estimate of the duration of each task in hours should be done. A work breakdown schedule should be formulated and a task schedule/Gantt chart prepared.

A sample project schedule is as shown below:

Task No.	Description	Task No. of hrs	Subtask No. of hrs	Planned Start Date	Actual Start Date	Planned Completion Date	Actual Completion date	Deliverables
1	Proposal			27.05.2026				Proposal document

9. Conclusion

There must be a conclusion. This states what is likely to be the outcome of the project.

10. References

All cited sources must be acknowledged by being referenced. Use APA referencing style
